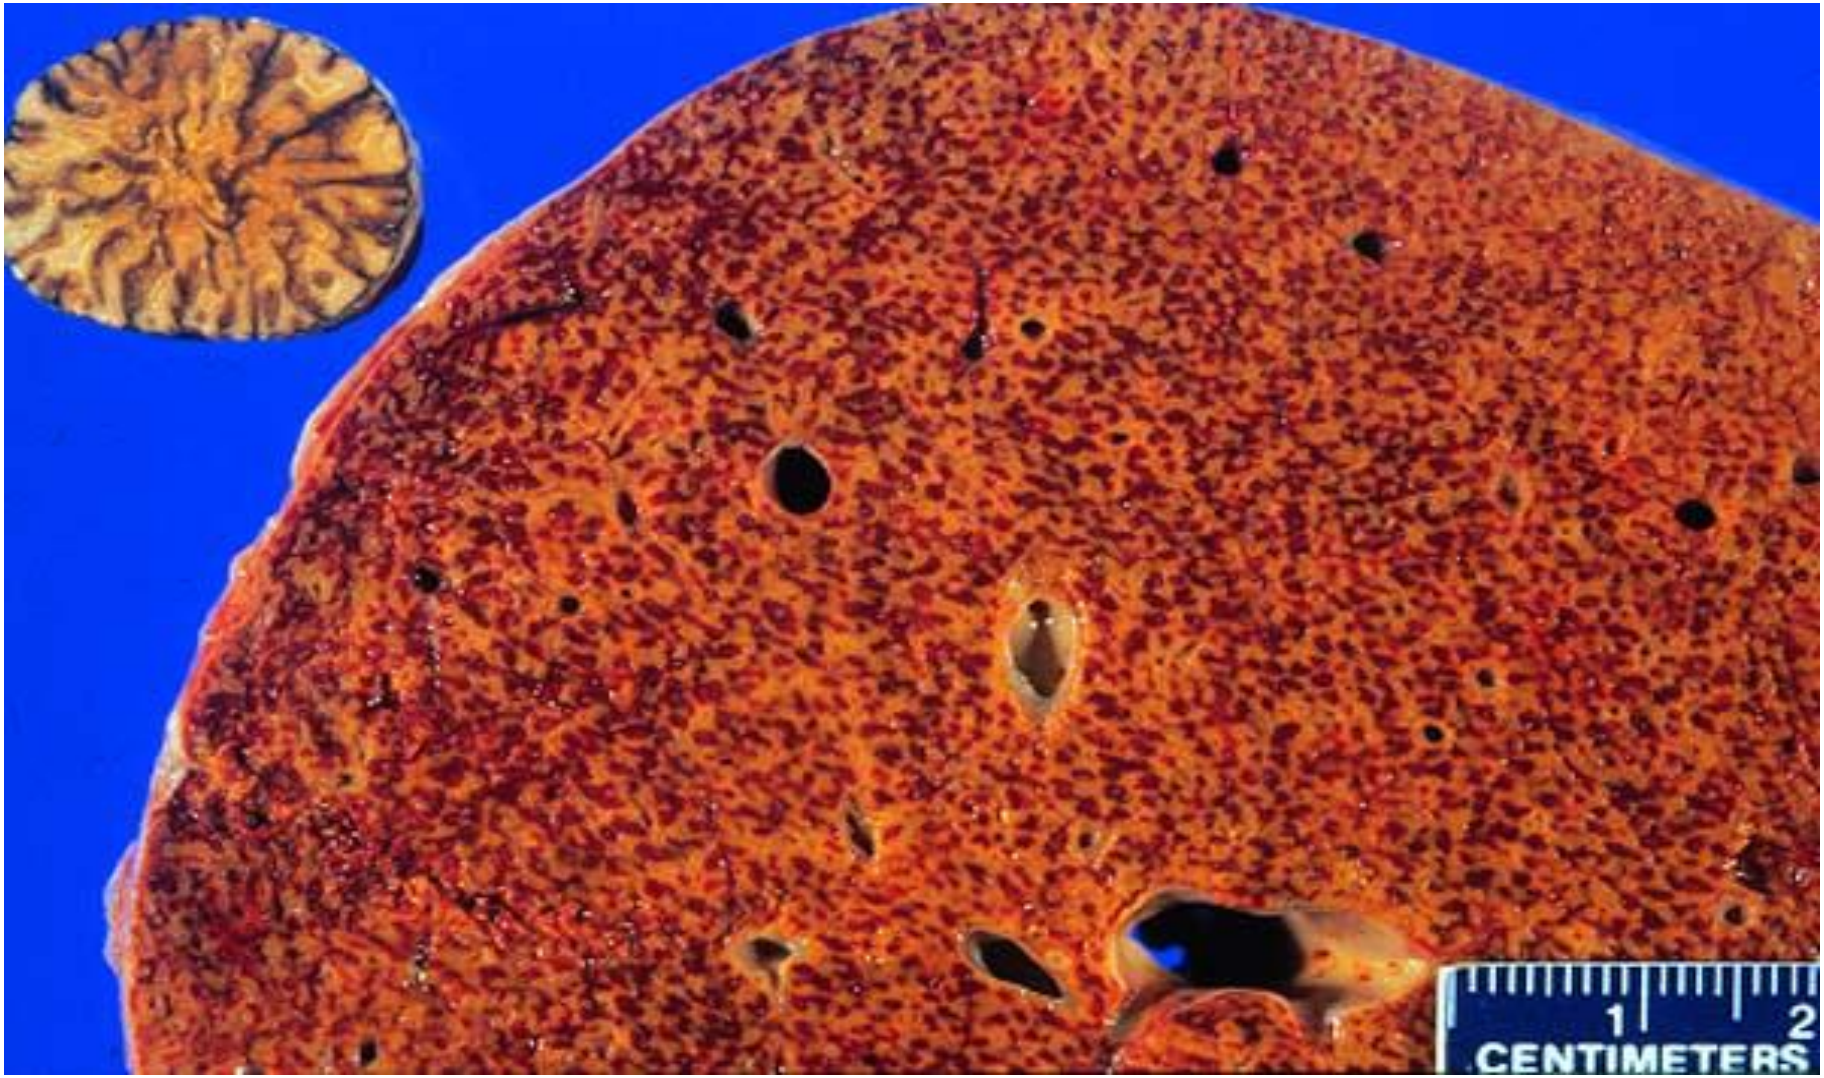
- Longitudinal, slightly elevated (hypertrophied), show claw-like extentions (transverse scars at sites of surgical sutures)

Scar Hypertrophy

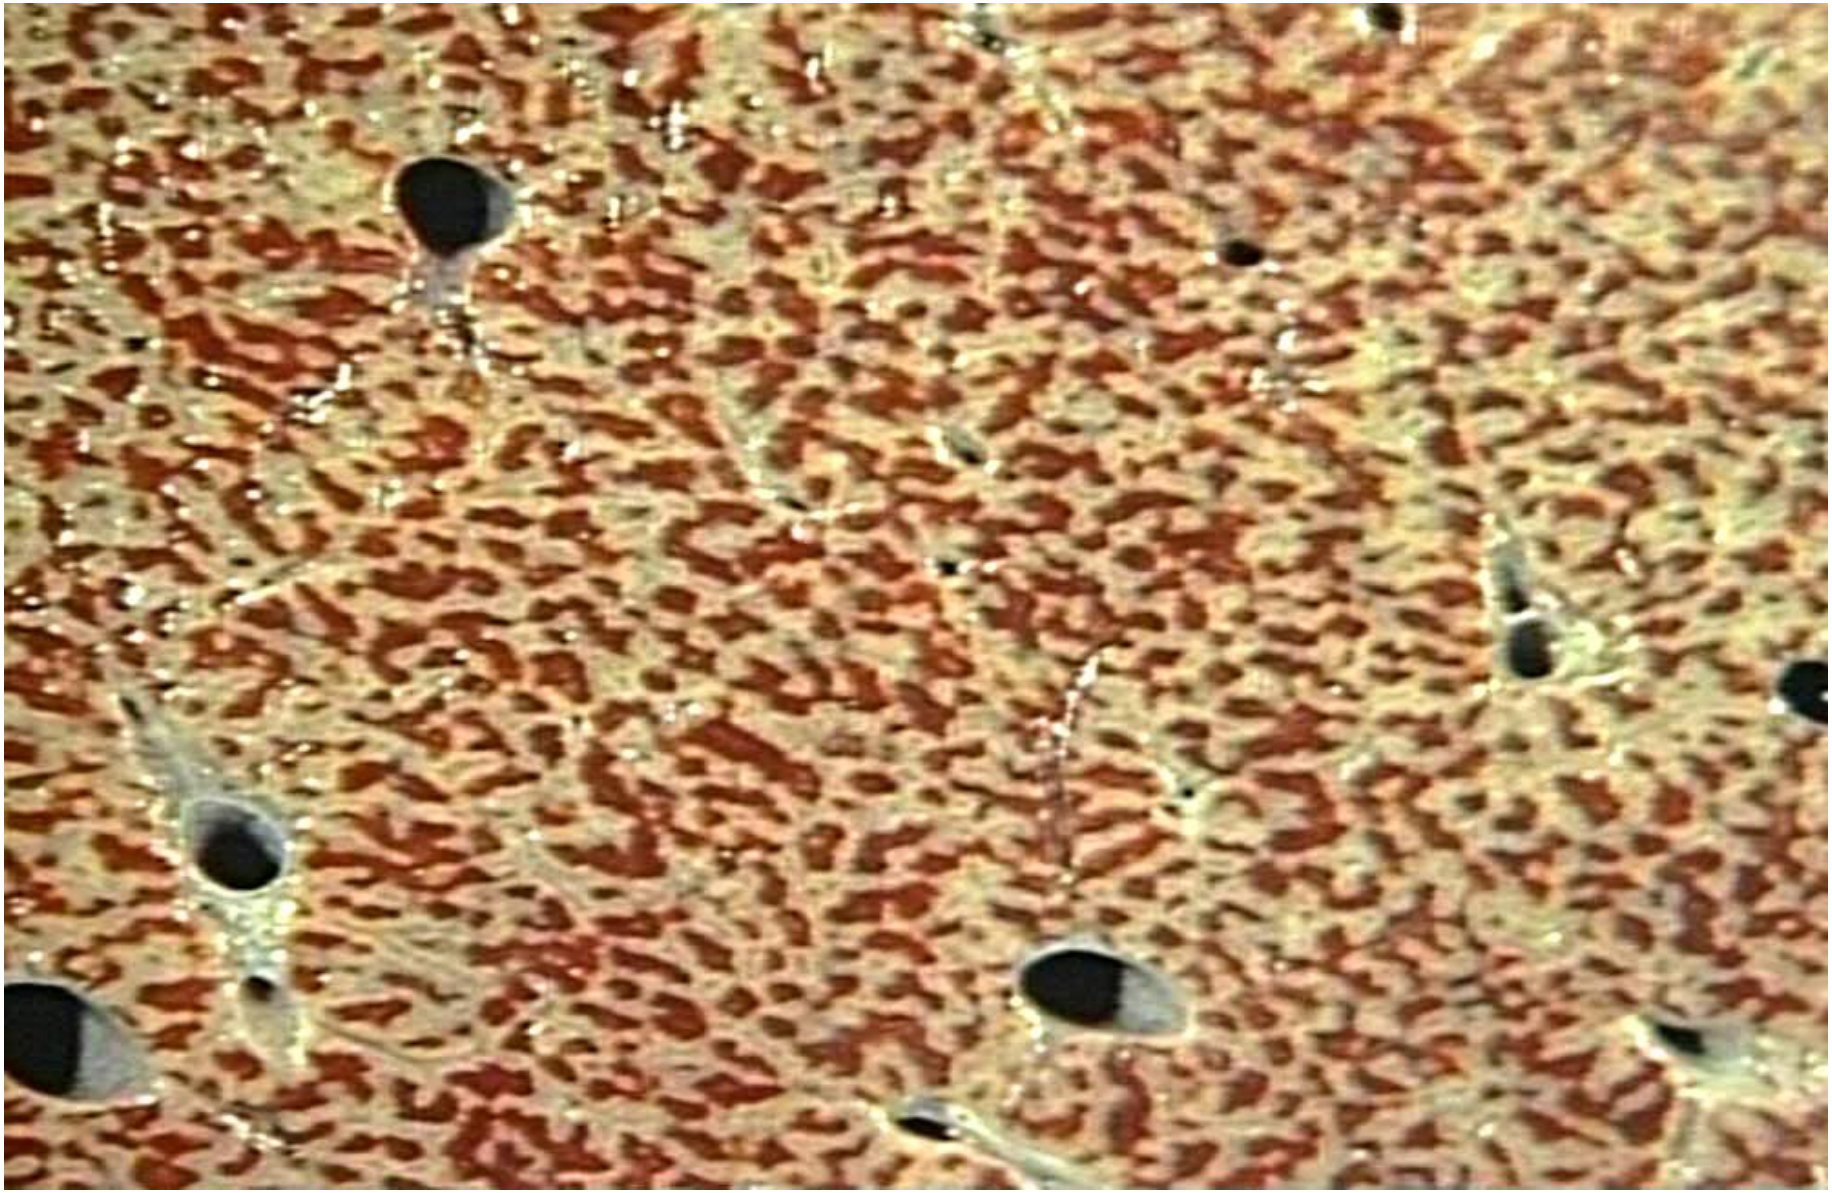
Scar Hypertrophy

Keloid

Nutmeg liver

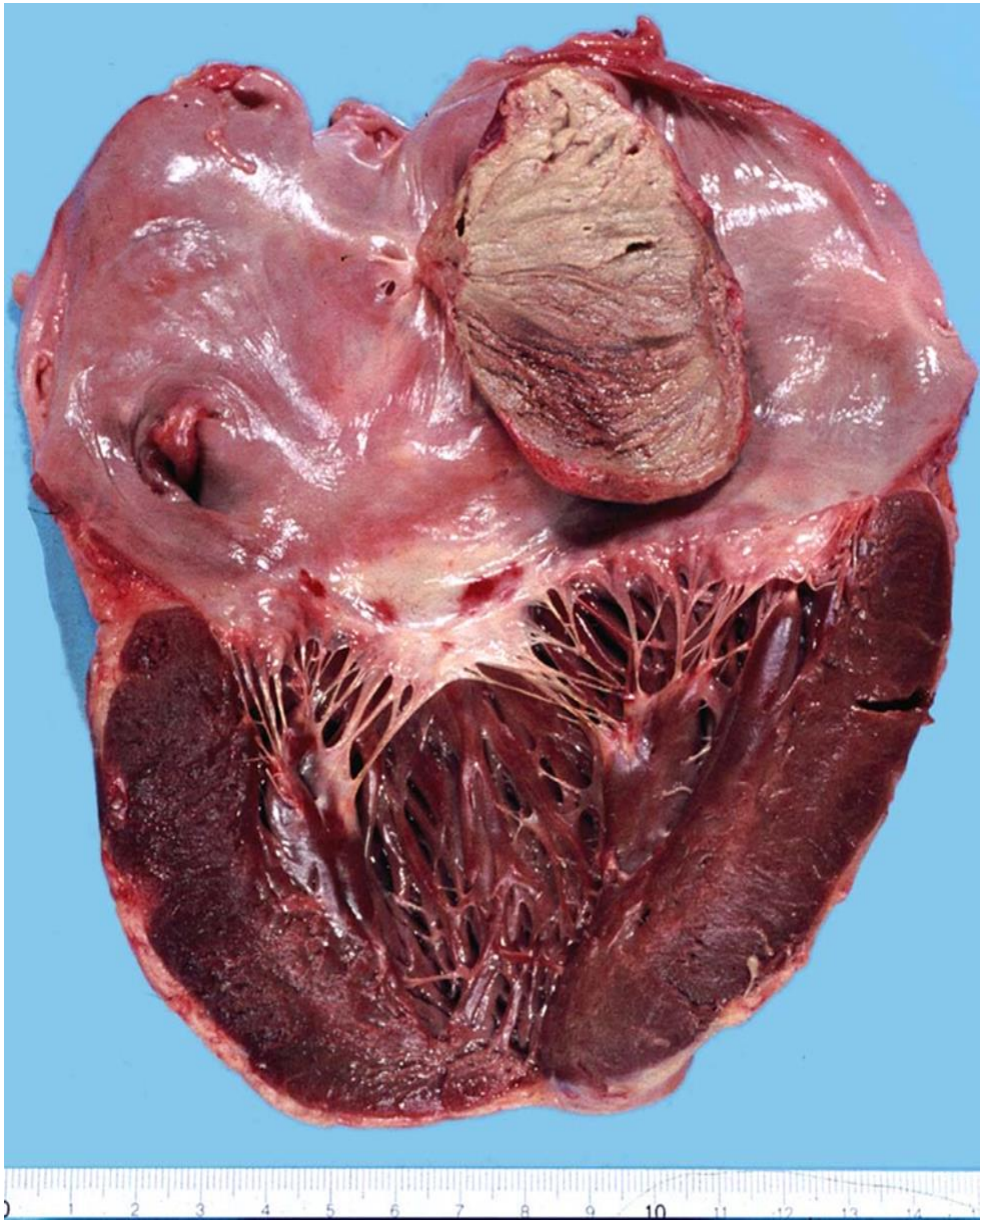


Nutmeg liver

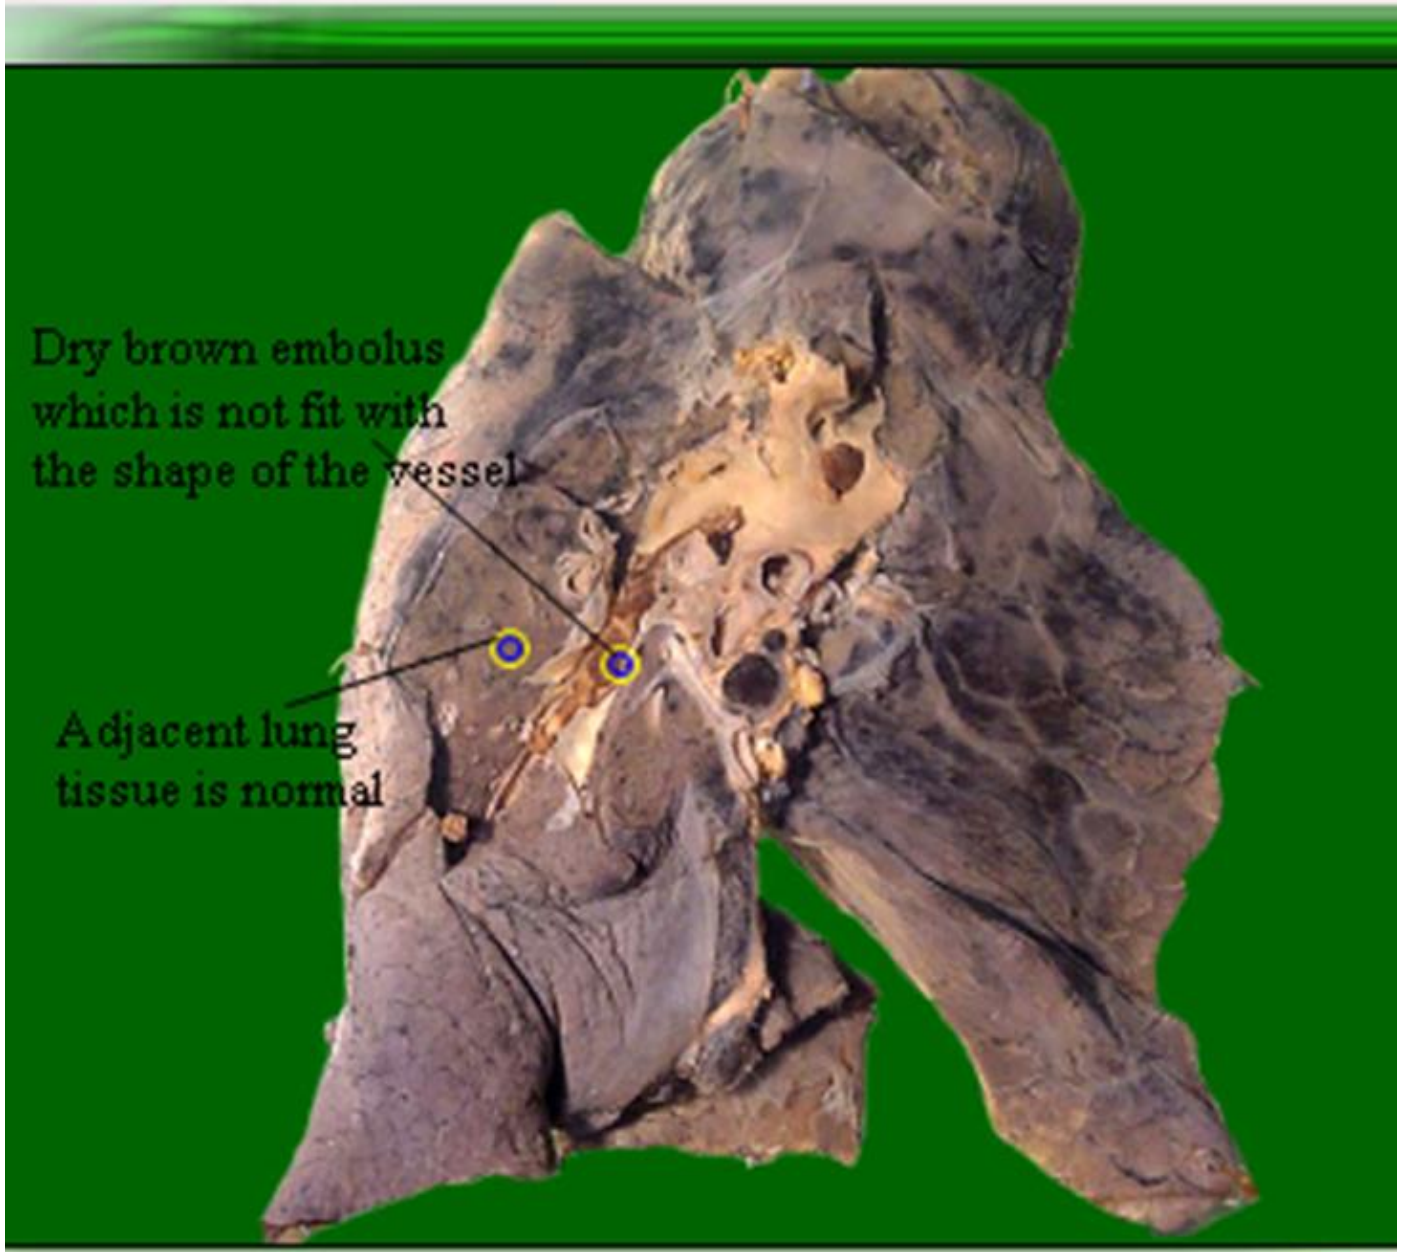


Femoral vein thrombosis

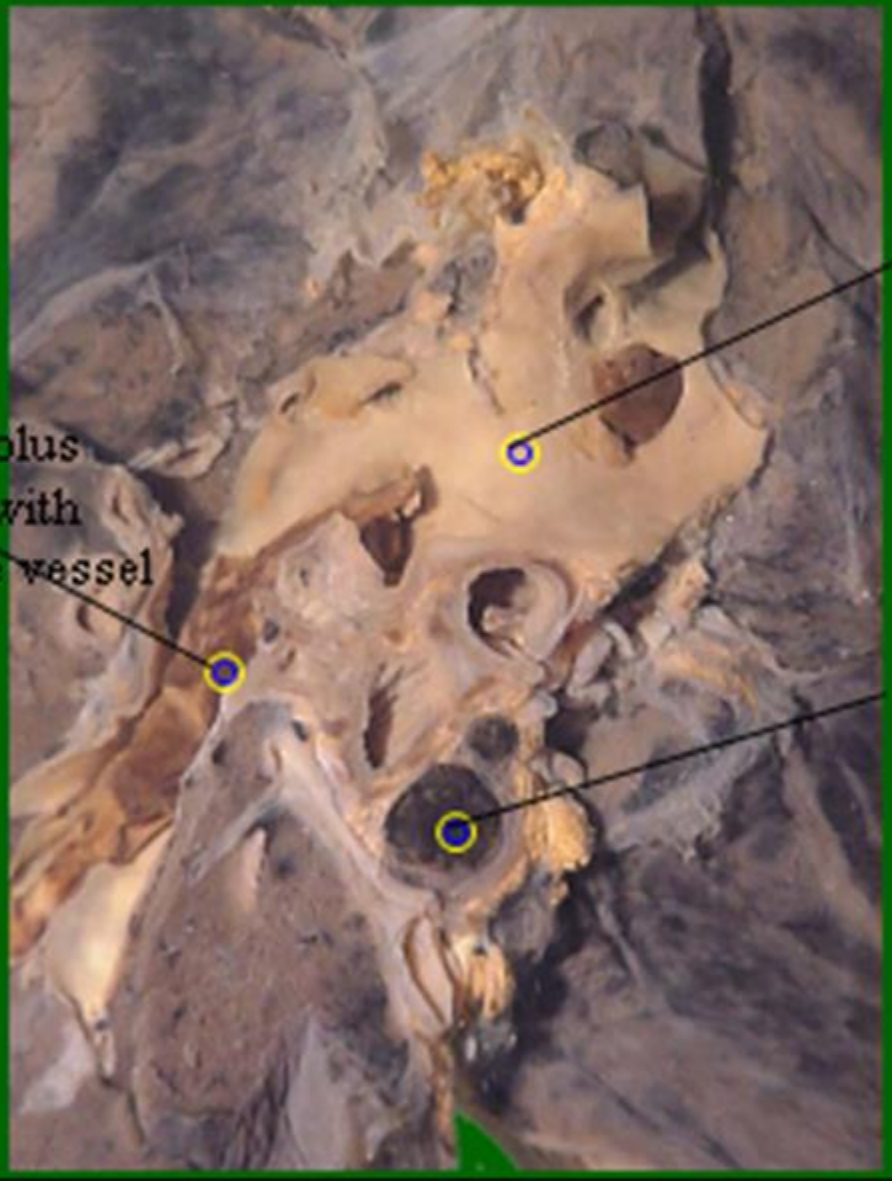
Thrombus in the atrium



Massive Pulmonary Embolism



Massive Pulmonary Embolism

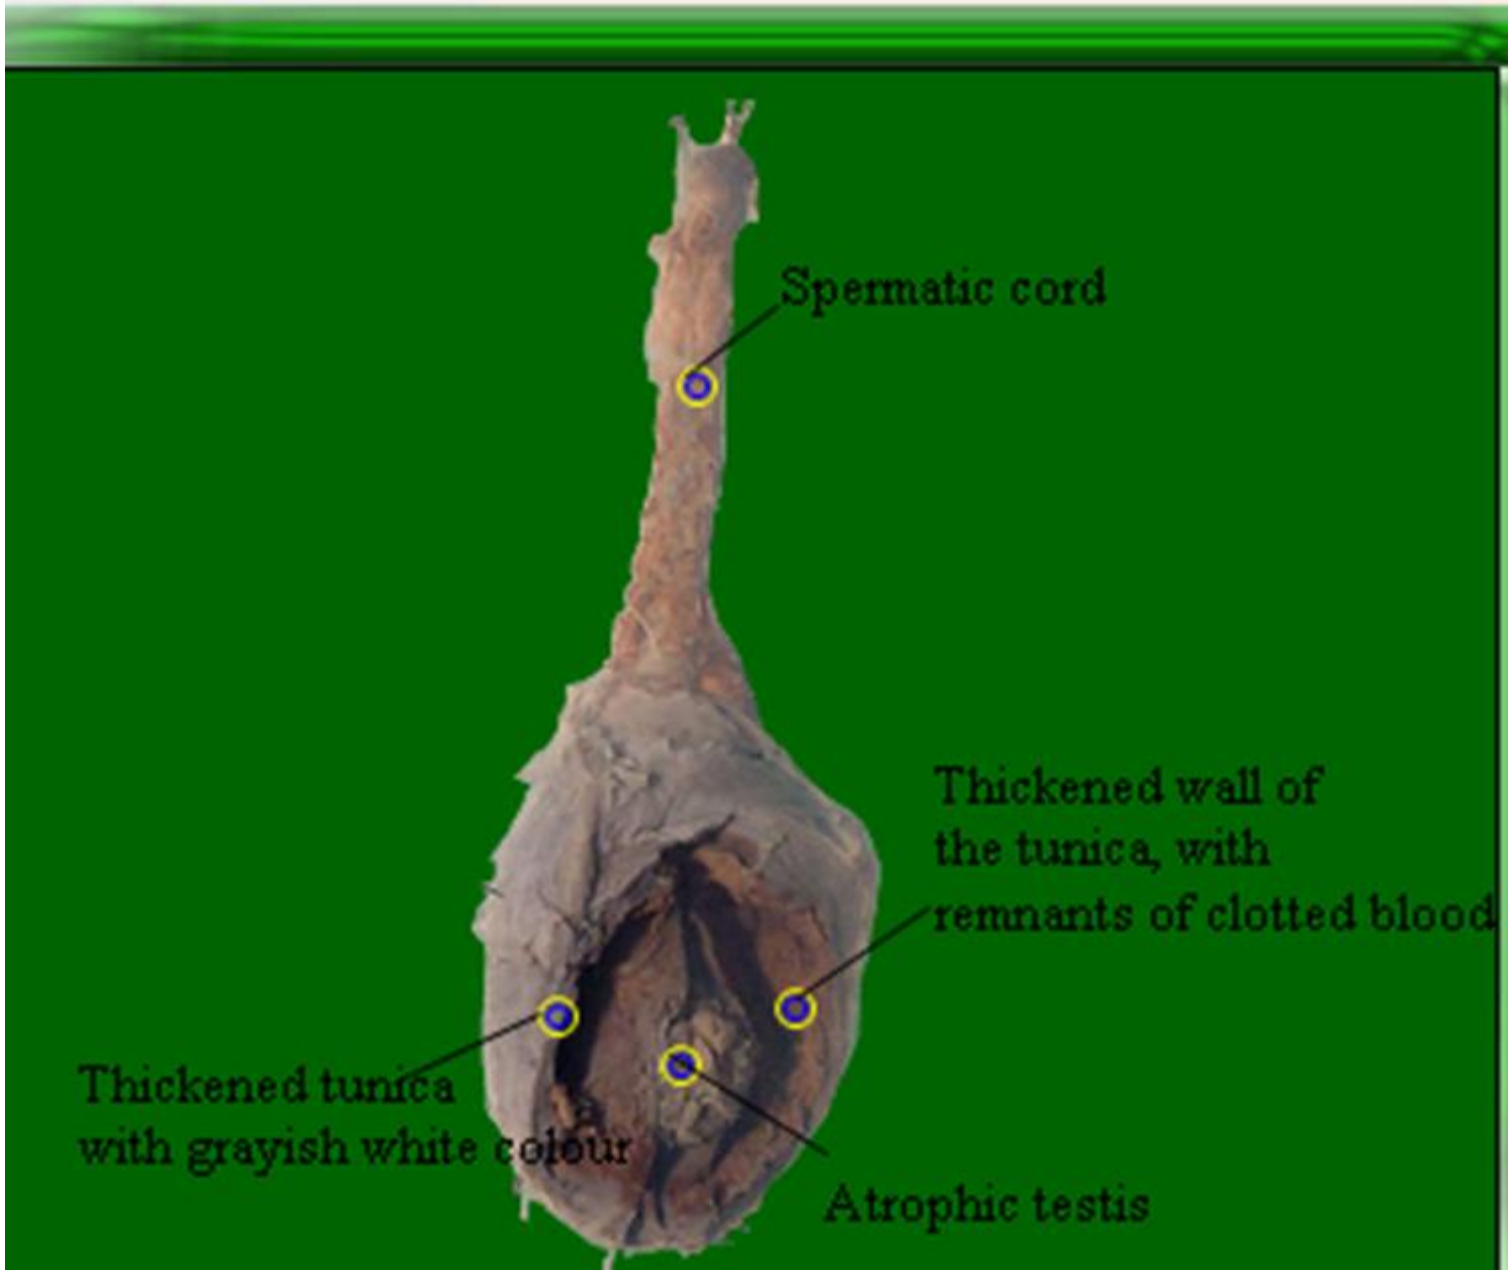


Inner side of the vessel wall
Dry brown embolus which is not fit with the shape of the vessel
Part of the embo within a branch of the vessel

Dry gangrene of the foot

Moist gangrene of forearm

Haematocele



Spermatic cord
Thickened wall of the tunica, with remnants of clotted blood
Thickened tunica with grayish white colour
Atrophic testis

Massive spontaneous cerebral haemorrhage.

Massive spontaneous cerebral haemorrhage.
